

RoHS 2002/95/EC

Vacuum Fluorescent Display

Module

Specification

Model: GU140X32F-7053

Specification No: DS-1489-0001-00

Date Of Issue: October 30 , 2007

Revision:

Published by
NORITAKE ITRON CORP. / Japan

1 General Description

1.1 Scope

This specification covers the operation and operating requirements of the vacuum fluorescent graphic display module GU140X32F-7053.

1.2 Construction

The module consists of a 140 x 32dot graphic BD-VFD, refresh RAM, character generator, DC/DC converter, display controller, and all necessary control logic. The module can simultaneously display graphic patterns and/or characters on the screen.

1.3 Outline

Power supply: + 5 V_{DC} only
 Interface: Serial interface (C-MOS Synchronous or Asynchronous, Selectable)
 Function: Character display, 5x7, Attribution
 (5x7Character font, refer to spec. of DS-898-0002-xx)
 Graphic display
 Control command
 Character download function
 Screen saver function

Applied reliability spec: TT-99-3102

Applied production spec: TT-98-3413

1.4 Weight

About 57 g

1.5 Block Diagram

2 Electrical specification

2.1 Absolute Maximum Ratings

| Parameter | Symbol | Min. | Typ. | Max. | Unit |
|---|--------|------|------|---------|------|
| Power Supply Voltage | VCC | -0.3 | - | +6.0 | VDC |
| Logic Supply Voltage SIN,SCK,/ RESET | VIN | -0.3 | - | Vcc+0.3 | VDC |

2.2 Electrical ratings

| Parameter | Symbol | Min. | Typ. | Max. | Unit |
|----------------------|--------|------|------|------|------|
| Power Supply Voltage | VCC | 4.75 | 5.0 | 5.25 | VDC |

All driving voltage for the VFD is converted from the DC/DC converter on board.

2.3 Electrical Characteristics

Measuring Conditions: Ambient temperature = 25degrees C, VCC =5.0VDC

| Parameter | Symbol | Min. | Typ. | Max. | Unit | Condition | Note |
|---|--------|------|--------|------|--------|-----------|------------|
| "L" Level Logic Input Current SIN, SCK, /RESET | IIL | | | -0.6 | mA | VIN=0V | |
| "H" Level Logic Input Current SIN, SCK, /RESET | IIH | - | - | 1.0 | uADC | VIN=5V | - |
| Logic Input Voltage SIN, SCK, /RESET | "H" | VIH | 0.8VCC | - | VCC | - | - |
| | "L" | VIL | 0 | - | 0.2VCC | VDC | - |
| Logic Output Voltage SBUSY, | "H" | VOH | 3.8 | - | VCC | VDC | IOH=-1.5mA |
| | "L" | VOL | 0 | - | 0.6 | VDC | IOL=1.6mA |
| Power Supply Current 1 | ICC1 | - | 400 | 520 | mADC | - | (1) |
| Power Supply Current 2 | ICC2 | - | 330 | 430 | mADC | - | (2) |
| Power Supply Current 3 | ICC3 | - | 35 | 45 | mADC | - | (3) |
| Power Consumption | | - | 2.0 | 2.6 | W | - | (1) |

Note

(1),(2) Icc1 shows the current at all dots in the screen are lighted and Icc2 at all dots off. At power on rush, more than 2times current of above table should be expected. Provide the quick rise type power supply (<100msec.).

(3)Icc3 shows the current at Power OFF Mode (Power save mode).

3 Optical Specifications

| | |
|------------------------|---|
| Number of dots: | 4,480 (140 x 32) |
| PCB Size: | 98.0 mm x 47.0 mm (X x Y) |
| Display area: | 69.85mm x 21.61mm(X x Y) |
| Dot size: | 0.35mm x 0.53mm(X x Y) |
| Dot pitch: | 0.50mm x 0.68mm (X x Y) |
| Luminance: | 350cd/m ² Min. (700cd/m ² Typ.) |
| Color of illumination: | Green (Blue Green) |

4 Environmental Specifications

| | |
|------------------------|--|
| Operating temperature: | -40 to +85degrees C |
| Storage temperature: | -40 to +85degrees C |
| Operating humidity: | 20 to 80 % R.H(Non Condensing) |
| Storage humidity: | 20 to 80 % R.H(Non Condensing) |
| Vibration: | 10-55-10Hz, all amplitude 1mm, 30Min., X-Y-Z (Non operating) |
| Shock: | 392m/s ² (40G) 9mS X-Y-Z, 3times each direction (Non operating) |

5 Interface

5.1 Type of interface

The following interfaces are available on this module;
Serial interface (C-MOS Synchronous or Asynchronous, Selectable)

5.2 Serial interface

5.2.1 Basic function

There are two Serial interfaces: C-MOS Synchronous or Asynchronous and they are Selectable by jumper. The module sets the SBUSY line upon receipt of data, and clears the line when ready to receive more data.

5.2.2 Asynchronous serial interface timing

Receiving Buffer Capacity: 12 byte

SBUSY change timing:

| SBUSY | 1(BUSY) | 0(READY) |
|-----------|------------------------------|---------------------------------|
| Condition | When there is data in buffer | When there is no data in buffer |

Data can be stored into receiving buffer. However, it recommends not sending the data when SBUSY=1.

5.2.3 Synchronous serial interface timing

Receiving Buffer Capacity: 12 byte

SBUSY change timing:

| SBUSY | 1(BUSY) | 0(READY) |
|-----------|------------------------------|---------------------------------|
| Condition | When there is data in buffer | When there is no data in buffer |

Data can be stored into receiving buffer. However, it recommends not sending the data when SBUSY=1.

5.3 Reset timing

Reset pulse (active low) should be longer than 1mS.

The module sets the SBUSY line upon receipt of Reset signal and clears the line when ready to receive the data.

6 Display specification

6.1 Displayable image types

6.1.1 Graphic display

Number of dot: 140 x 32 dots

6.1.2 Character display

Character mode: 5 x 7 dot

Character font type: 5 x 7 dot - Characters, ANK, international font

Character display width: Fixed character format 1 & 2, Proportional character format 1 & 2.

Attribution: Character magnify, Reverse

6.2 Display memory

Size: 256x 32 dots - separated as: Display area (140x32dots)

Hidden area (116x32dots).

Hidden area also can be displayed by using "Display action command group" Refer to "Display action command group", Page 18.

By using "User Window" function, All display area can be separated, and each window separated can be controlled independently.

6.3 Window

Window function divides display screen as "Window", and each divided "Window" can be controlled and displayed independently. Refer to "Window command group", Page 23.

There is no independent display memories for each "Window".

There are 2 types of "Window", Base-Window and User-Window.

6.3.1 Base-Window

This has the whole display screen and if User-Window is not defined, all display operation is processed under this Base-Window.

When some User-Window is defined, the display operation to the out of display screen of User-Window should be processed under Base-Window.

When Base-Window is selected even if some User-Window is defined, all of display operation is processed under Base-Window. Therefore, the current display pattern of User-Window is overwritten.

6.3.2 User-Window

User-Window is defined by command, and display operation can be processed on User-Window selected by "Current Window select" command.

User-Window can be defined up to 4 windows.

6.4 Write screen mode for “Base Window”

This effects only for Base Window.

There are two types of Write screen mode, Display screen mode and All screen mode which can be changed by command. (Refer to Window command group , “Write screen mode select”,Page 25)

6.4.1 Display screen mode (Scanning)

When the cursor is located on the Display area, all of operation will be done within Display area, and when cursor is located on the Hidden area, it will be done within Hidden area.

6.4.2 All screen mode (Scanning)

All of operation will be done on all of area.

6.5 Character display format

Character display format is following selectable by "Character display width" command.

| Type of character | Display position | Format | Fixed character width 1 | Fixed character width 2 | Proportional character width 1 | Proportional character width 2 |
|--|------------------|------------------|-------------------------|-------------------------|--------------------------------|--------------------------------|
| Standard character and Download character 5x7dot | Y=0~3 | Character format | 5 x 7 | 5 x 7 | n x 7 | n x 7 |
| | | Upper space | 0 | 0 | 0 | 0 |
| | | Lower space | 1 | 1 | 1 | 1 |
| | | Left space | 0 | 1 | 0 | 1 |
| | | Right space | 1 | 1 | 1 | 1 |
| Download character 7x8 | Y=0~3 | Character format | 6 x 8 * | 7 x 8 | 6 x 8 * | 7 x 8 |
| | | Upper space | 0 | 0 | 0 | 0 |
| | | Lower space | 0 | 0 | 0 | 0 |
| | | Left space | 0 | 0 | 0 | 0 |
| | | Right space | 0 | 0 | 0 | 0 |

* The most left part of 6x8 dot within 7x8 dot is displayed.

Note: In case of proportional character width is specified, the blank character (20H) will be operated as same as 2 dot width character.

Fixed character width 1

Fixed character width 2

Proportional character width 1

Proportional character width 2

7 Function

7.1 Commands

The details of each command as follows;

Note: The size of character (X x Y dot) described in this section is depending on the command of "Character display width" or "Font magnified display".

Number of X dot and Y dot for 1 character width for each commands except "Character display" under the condition of each character display width are as follows;

| Character type | Fixed character width 1 | Fixed character width 2 | Proportional character width 1 | Proportional character width 2 |
|-----------------|-------------------------|-------------------------|--------------------------------|--------------------------------|
| Number of X dot | 5 + 1 | 5 + 2 | 5 + 1 | 5 + 2 |
| Number of Y dot | 7 + 1 | 7 + 1 | 7 + 1 | 7 + 1 |

7.1.1 Character display

Code: 20H – FFH

Name: Character display

Function: Display the character on cursor position.

This command effects on the current window selected by "Current window select".

When MD1 mode is selected.

| Cursor position | | Operation |
|--|--|---------------------|
| X direction | Y direction | |
| The space for 1 character size is in right side. | - | Display >> HT |
| Right end | The space for one line is in the lower side. | HT >> Display >> HT |
| | The space for one line is NOT in the lower side. | HT >> Display >> HT |

When MD2 mode is selected.

| Cursor position | | Operation |
|--|--|---------------------|
| X direction | Y direction | |
| The space for 1 character size is in right side. | - | Display >> HT |
| Right end | The space for one line is in the lower side. | HT >> Display >> HT |
| | The space for one line is NOT in the lower side. | HT >> Display >> HT |

When MD3 mode is selected.

| Cursor position | | Operation |
|--|-------------|---------------------|
| X direction | Y direction | |
| The space for 1 character size is in right side. | - | Display >> HT |
| Right end | - | HT >> Display >> HT |

7.1.2 BS *(Back Space)*

Code: 08H

Function: The cursor moves to left by one character.

This command effects on the current window selected by "Current window select".

When MD1 and 2 modes is selected.

| Cursor position | | Operation |
|---|--|--|
| X direction | Y direction | |
| The space for 1 character size is in left side. | - | The cursor moves to left by one character. |
| Left end | The space for one line is in the lower side. | The cursor moves to the right end of one upper line. |
| | The space for one line is NOT in the lower side. | The cursor does not move. |

When MD3 mode is selected.

| Cursor position | | Operation |
|---|-------------|--|
| X direction | Y direction | |
| The space for 1 character size is in left side. | - | The cursor moves to left by one character. |
| Left end | - | The cursor does not move. |

7.1.3 HT *(Horizontal Tab) – 1 character to right*

Code: 09H

Function: The cursor moves to right by one character. This command effects on the current window selected by "Current window select". The detail of operation is:

When MD1 mode is selected.

| Cursor position | | Operation |
|--|--|---|
| X direction | Y direction | |
| The space for 1 character size is in right side. | - | The cursor moves to right by one character. |
| Right end | The space for one line is in the lower side. | The cursor moves to the left end of one lower line. |
| | The space for one line is NOT in the lower side. | The cursor moves to the left end of top line. |

When MD2 mode is selected.

| Cursor position | | Operation |
|--|--|---|
| X direction | Y direction | |
| The space for 1 character size is in right side. | - | The cursor moves to right by one character. |
| Right end | The space for one line is in the lower side. | The cursor moves to the left end of one lower line. |
| | The space for one line is NOT in the lower side. | All displayed pattern is scrolled up to one upper line, displayed pattern of lowest line is cleared. And cursor moves to left end of bottom line. |

When MD3 mode is selected.

| Cursor position | | Operation |
|--|-------------|---|
| X direction | Y direction | |
| The space for 1 character size is in right side. | - | The cursor moves to right by one character. |
| Right end | - | The displayed pattern on cursor line is scrolled to left by one character, Right end character is cleared, and cursor moves to the right end. |

7.1.4 LF *(Line Feed)*

Code: 0AH

Function: The cursor moves to one lower line. This command effects on the current window selected by "Current window select". The detail of operation is as follows;

When MD1 modes is selected.

| Cursor position | | Operation |
|-----------------|--|--|
| X direction | Y direction | |
| - | The space for one line is in the lower side. | The cursor moves to the same position of one lower line. |
| - | The space for one line is NOT in the lower side. | The cursor moves to the left end of top line. |

When MD2 mode is selected.

| Cursor position | | Operation |
|-----------------|--|---|
| X direction | Y direction | |
| - | The space for one line is in the lower side. | The cursor moves to the same position of one lower line. |
| - | The space for one line is NOT in the lower side. | All of displayed pattern is scrolled to one upper line, and displayed pattern of bottom line is cleared. The cursor does not move. |

When MD3 mode is selected.

| Cursor position | | Operation |
|-----------------|-------------|---------------------------|
| X direction | Y direction | |
| - | - | The cursor does not move. |

7.1.5 HOM *(Home Position)***Code:** **0BH**

Function: The cursor moves to the home position. This command effects on the current window selected by "Current window select".

7.1.6 CR *(Carriage Return)***Code:** **0DH**

Function: The cursor moves to left end of same line. This command effects on the current window selected by "Current window select".

7.1.7 US \$ xL xH yL yH *(Cursor Set)***Code:** **1FH 24H xL xH yL yH**

xL: Cursor position x Lower byte (1 dot/unit)

xH: Cursor position x Upper byte (1 dot/unit)

yL: Cursor position y Lower byte (8 dot/unit)

yH: Cursor position y Upper byte(8 dot/unit)

Definable area: $0 \leq (xL + xH \times 256) \leq 255$

$0 \leq (yL + yH \times 256) \leq 3$

Function: The cursor moves to specified X, Y position on display memory. If the specified X, Y position (X, Y, either or both) is over range, the command is ignored, and keep same cursor position.

This command effects on the current window selected by "Current window select".

7.1.8 CLR *(Display Clear)***Code:** **0CH**

Function: The display screen is cleared and the cursor moves to home position after this command was executed. This command effects on the current window selected by "Current window select".

7.1.9 US C n *(Cursor ON/OFF)***Code:** **1F 43H n**

n: Display cursor ON/OFF select

n = 0 : Cursor OFF

n = 1 : Cursor ON

Default: n = 0

Function: Select cursor ON or OFF.

When cursor display ON is selected, the cursor position is displayed by 1x8 dots.

7.1.10 ESC@ *(Initialize Display)***Code:** **1BH 40H**

Returns to default.

DIP Switch is not re-loaded.

The contents of receiving buffer remain in memory.

7.1.11 ESC % n (Specify Download Register)

Code: 1BH 25H n

Function: Specify enable or disable for download character.

n = 1: Enable (If download character is not defined, built-in character is displayed)

n = 0: Disable (Characters already downloaded, defined, and displayed are not affected)

7.1.12 ESC & a c1 c2 [x1 d1...d(a×x1)]...[xk d1...d(a×xk)] (Download character definition)

Code: 1Bh 26h a c1 c2 [x1 d1...d(a×x1)]...[xk d1...d(a×xk)]

a: Select character type

c1: Start character code

c2: End character code

x: Number of dot for X direction

d: Defined data

Definable area: a = 1

x = 5: 5x7 dot font

x = 7: 7x8 dot font

32 ≤ c1 ≤ c2 ≤ 255

0 ≤ d ≤ 255

x = 5: Upper 7 bit is valid.

x = 7: All 8 bit is valid.

k = c2 - c1 + 1

Function: To define download characters into RAM.

A maximum of 16 characters may be downloaded and defined.

x=5 : Defined by 5x7dot, and 5x7 dot character regulated upper and lower space is displayed as same as standard character display.

x=7 : Defined by 7x8 dot, and 6x8 or 7x8 dot character unrelated to space is displayed.

After the first 16 are defined, any additional characters required must replace one already defined.

Downloaded characters are valid until they redefined, an initialize (ESC@) sequence is executed, or the power is turned off. To display the download character, excution of "Download character definition" and "Specify download character" is required. In case of displaying download character is re-defined, displaying character is not changed, new download character is applied from new data.

(5x7 dot)

| | | | | | | |
|----|--|----|----|----|----|----|
| B7 | | | | | | |
| B6 | | | | | | |
| B5 | | | | | | |
| B4 | | | | | | |
| B3 | | | | | | |
| B2 | | | | | | |
| B1 | | | | | | |
| B0 | | d1 | d2 | d3 | d4 | d5 |

(7x8dot)

| | | | | | | |
|----|--|----|----|----|----|----|
| B7 | | | | | | |
| B6 | | | | | | |
| B5 | | | | | | |
| B4 | | | | | | |
| B3 | | | | | | |
| B2 | | | | | | |
| B1 | | | | | | |
| B0 | | d1 | d2 | d3 | d4 | d5 |
| | | | | | | d7 |

7.1.13 ESC ? a c *(Delete downloaded character)*Code: **1BH 3FH a c**

a: Select character

c: Character code for delete

Definable area: a = 1

32 ≤ c ≤ 255

Function: Delete defined download character.

The built-in character is displayed after this command is executed.

It does not affect to the displaying download character.

This command is ignored if character code for download character is not defined.

7.1.14 ESC R n *(Specifies International font set)*Code: **1BH 52H n**

Definable area: 0 ≤ n ≤ 13

Default: n=0

Function: Select international font set.

| n | Font set |
|----|---------------|
| 0 | America |
| 1 | France |
| 2 | Germany |
| 3 | England |
| 4 | Denmark 1 |
| 5 | Sweden |
| 6 | Italy |
| 7 | Spain1 |
| 8 | Japan |
| 9 | Norway |
| 10 | Denmark2 |
| 11 | Spain2 |
| 12 | Latin America |
| 13 | Korea |

7.1.15 ESC t n *(Specifies character code type)*Code: **1BH 74H n**

Definable area: n = 0, 1, 2, 3, 4, 5, 16, 17, 18, 19

Default: n = 0

Function: Selects font code

| n | Font code type |
|----|-------------------------|
| 0 | PC437(USA – Euro std) |
| 1 | Katakana – Japanese |
| 2 | PC850 (Multilingual) |
| 3 | PC860 (Portuguese) |
| 4 | PC863 (Canadian-French) |
| 5 | PC865 (Nordic) |
| 16 | WPC1252 |
| 17 | PC866 (Cyrillic #2) |
| 18 | PC852 (Latin 2) |
| 19 | PC858 |

7.1.16 US MD1 *(Over-write mode)*Code: **1FH 01H**

Function: Over-writes, or replaces existing data.

This command effects on the current window selected by "Current window select".

7.1.17 US MD2 *(Vertical scroll mode)***Code:** 1FH 02H**Function:** Scrolls cursor up 1 line

This command effects on the current window selected by “Current window select” .

7.1.18 US MD3 *(Horizontal scroll mode)***Code:** 1FH 03H**Function:** Scrolls cursor horizontally 1 space

This command effects on the current window selected by “Current window select” .

7.1.19 US s n *(Horizontal scroll speed)***Code:** 1FH 73H nDefinable area: $0 \leq n \leq 31$

Default: n = 0

Note that until scrolling action is ended, new command(s) will not be executed. Scroll base speed “T” is depending on write screen mode, character size selected.

| If n=0 is specified, scrolling is appeared by character n | Speed |
|---|-----------------------------|
| 0 | By Character |
| 1 | T msec / 2dots |
| 2 – 31 | $(n-1) \times T$ msec / dot |

7.1.20 US r n *(Specifies or cancels reverse display)***Code:** 1FH 72H n

n : Specify or cancel reverse character and graphic display

Definable area: $0 \leq n \leq 1$

n=0: Cancel reverse mode

n=1: Specify reverse mode

Default: n=0

Note: This command is valid to the new data after this command is specified.

This does not affect the contents already displayed.

7.1.21 US w n (Specifies write mixture display mode)**Code:** 1FH 77H n

n : Specif display write mode

Definable area: $0 \leq n \leq 3$

n = 0: Normal display write. (Not mixture display)

n = 1: OR display write

n = 2: AND display write

n = 3: EX-OR display write

Default: n = 0

Function: Specifies write mixture mode. The new character or graphic image display mixed with current display image stored in display memory is overwritten to the display memory.

7.1.22 US X n (Brightness level setting)**Code:** 1FH 58H n

n : Brightness level setting

Definable area: $1 \leq n \leq 8$

Default: n=8

Function: Specify brightness level of whole display screen.

| n | Level |
|---|-------|
| 1 | 12.5% |
| 3 | 37.5% |
| 5 | 62.5% |
| 7 | 87.5% |
| 2 | 25% |
| 4 | 50% |
| 6 | 75% |
| 8 | 100% |

7.1.23 US (a n [parameter] (Display action command group)

Function: Execute processing of display action command.

| n | Function No. | Function |
|-----|--------------|-----------------------|
| 01H | Function 01H | Wait |
| 10H | Function 10H | Scroll display action |
| 11H | Function 11H | Blink display action |
| 40H | Function 40H | Screen saver |

n: specify function code.

The next command or data is not excuted until display action processing is ended.

7.1.24 <Function 01H> US (a n t (Wait)**Code:** 1FH 28H 61H 01H t

n: Classify command

t: Wait time

Definable area: n = 01H

 $0 \leq t \leq 255$

Note: Wait time, define, command, and data processing are stopped while waiting by this command. Wait time = t X approx. 0.5sec

7.1.25 <Function 10H> US (a n wL wH cL cH s

(Scroll display action)

Code: 1FH 28H 61H 10H wL wH cL cH s

n : Classify command
 wL: Display screen shift ,number of upper byte.
 wH: Display screen shift ,number of lower byte.
 cL: Number of repetition lower byte
 cH: Number of repetition upper byte
 s: Scroll action speed

Definable area: n = 10H

$$0 \leq (wL + wH \times 256) \leq 1023$$

$$0 \leq (cL + cH \times 256) \leq 65535$$

$$0 \leq s \leq 255$$

Function: Shift the display screen.

Horizontal scrolling can be possible by specifying the shift byte to multiple number of (Display screen "y" dot /8). Display switching can be possible by specify shift byte to (Display screen "x" dot x Display screen "y" dot /8). Scroll speed is specified by "s". Scroll speed: s X approx. 14msec/1 shift

For example: 1dot scroll to the left: sL=04H, sH=00H

7.1.26 <Function 11H> US (a n p t1 t2 c) (Display Blink)**Code:** 1FH 28H 61H 11H p t1 t2 c

n: Classify command

p: Blink pattern

t1: Normal display time

t2: Brank or Reverse display time

c: Number of reptition

Definable area: n = 11H

0 ≤ p ≤ 2

p=0: Nomal display.

P=1: Repeat blink display with nomal and Brank display

P=2: Repeat blink display with nomal and Reverse display

1 ≤ t1 ≤ 255

1 ≤ t2 ≤ 255

1 ≤ c ≤ 255

Function: Blink display action Blink pattern specified by "p".

Time specified by "t1", "t2", and repeat Blink display

A : t1 X approx.14msec Nomal display

B: t2 X approx. 14msec Brank or Reverse display

This command does not affect to display memory.

If c=0 is specified, brink display is repeated until when c=1 – 255 or Initialize command is specified, and the command/data execution is continued during display blinking.

If c=1 – 255 is specified, brink display is repeated 1-255 times, and the command/data execution is stopped. After display blinking is ended, return to nomal display and command/data execution is re-started.

7.1.27 <Function 12H> US (a n p) (Screen saver)**Code:** 1FH 28H 61H 40H p

n: Classify command

p: Screen saver mode

Definable area: n = 40H

0 ≤ p ≤ 4

p=0: Power OFF (All dot OFF, Power save mode)

p=1: Power ON (All dot ON)

p=2: All dot OFF

p=3: All dot ON

p=4: Repeat blink display with nomal and Reverse display (Nomal :2sec., Reverse:2sec.)

Function: Control Power ON or OFF, and Start Screen saver mode.

p=0~1 : Control Power ON or OFF. This is applied until this command is re-specified

p=2~4 : Start Screen saver mode. This command is canceled if next any data is inputted during screen saver mode, and return to the previous display condition before screen saver mode specified.

7.1.28 US (f n [parameter]*(Bit image display group)*

Function: Execute processing of bit image data.

n: Specifies function code.

| n | Function No. | Function |
|-----|--------------|-----------------------------|
| 11H | Function 11H | Real-time bit image display |

7.1.29 <Function 11H> US (f n xL xH yL yH g d(1)...d(k)*(Real-time bit image display)*

Code: 1Fh 28h 66h 11h xL xH yL yH g d(1)...d(k)

n: Classify command

xL: Bit image X size lower byte (by 1dot)

xH: Bit image X size upper byte (by 1dot)

yL: Bit image Y size lower byte (by 8dots)

yH: Bit image Y size upper byte (by 8dots)

g: Image =1(Fixed)

d(1) - d(k): Image data (Refer to figure as follows)

Definable area: n = 11H

 $1 \leq (xL + xH \times 256) \leq 256$ $1 \leq (yL + yH \times 256) \leq 4$

g=1

 $0 \leq d \leq 255$

k = x X y X g

Function: Display the bit image data inputed on the cursor position real-time.

Cursor position will not change.

When bit image is display on cursor position, and if it overflows from the current window, it is displayed until edge of area defined, and remaining bit image overflowed is not displayed. If the Display position or image size e.t.c are defined to out of definable area, the command is ignored, and the data is valid as standard data.

7.1.30 US (g n [parameter] (Font command group)

Function: Execute processing of window command.

| N | Function No. | Function |
|-----|--------------|-------------------------|
| 03H | Function 03H | Character display width |
| 40H | Function 40H | Font magnified display |

n: specify function code.

7.1.31 <Function 03H> US (g n w (Character display width)

Code: 1FH 28H 67H 03H w

n: Classify command

w: Specify width

Definable area: n = 03H

0 ≤ w ≤ 3

w = 0: Fixed character width 1 (1 dot space in right side)

w = 1: Fixed character width 2 (1 dot space in each right and left side)

w = 2: Proportional character width 1 (1 dot space in right side)

w = 3: Proportional character width 2 (1 dot space in each right and left side)

Default: w= 1

Function: Specifies character display width.

Fixed character width 1 & 2: Character is written with fixed character width. (6 or 7dot)

Proportional character width: Character is written with proportioned character width.

7.1.32 <Function 40H> US (g n x y (Font magnified display)

Code: 1FH 28H 67H 40H x y

n: Classify command

x: Specify the size of magnification X

y: Specify the size of magnification Y

Definable area: n = 40H

1 ≤ x ≤ 4

1 ≤ y ≤ 2

Default: x = 1

Y = 1

Function: Specifies magnification of character.

Character is magnified including the space specified by Character display width command.

(x=1, y=1)

(x=2, y=2)

**7.1.33 US (w n [parameter]***(Window command group)*

Function : Execute processing of window / screen command.

| n | Function No. | Function |
|-----|--------------|-----------------------------------|
| 01H | Function 01H | Current window select |
| 02H | Function 02H | User-Window definition and cancel |
| 10H | Function 10H | Write screen mode select |

n: specify function code.

7.1.34 <Function 01H> US (w n a*(Current Window select)*

Code: 1FH 28H 77H 01H a

n: Classify command

a: Current window number

a = 0: Base-Window

a = 1 ~ 4: User-Window

Definable area: n = 01H

0 ≤ a ≤ 4

Function: Select current window

This command is ignored if current window number is specified for User-Window that is not defined.

7.1.35 <Function 02H> US (w n a b[xPL xPH yPL yPH xSL xSH ySL ySH]

(User Window definition-cancel)

Code: 1Fh 28h 77h n a b [xPL xPH yPL yPH xSL xSH ySL ySH]

n: Classify command
 a: Definable window No. No.1 ~ 4
 b: Define or Cancel b=0 : Cancel, b=1: Define
 xPL: Left position of window lower byte (by 1dot)
 xPH: Left position of window upper byte (by 1dot)
 yPL: Top position of window lower byte (by 8dot)
 yPH: Top position of window upper byte (by 8dot)
 xSL: X size of window lower byte (by 1dot)
 xSH: X size of window upper byte (by 1dot)
 ySL: Y size of window lower byte (by 8dot)
 ySH: Y size of window upper byte (by 8dot)

Definable area:

- n = 02H
- 1 \leq a \leq 4
- 0 \leq b \leq 1
- 0 \leq xP \leq 255
- 0 \leq yP \leq 3
- 1 \leq xS \leq 256
- 1 \leq yS \leq 4

Function: Define or cancel User-Window

Display contents are remained even if this command is excuted.

When User-Window is defined (b=1)

Specify Definable Window No., Window position and Window size, and Window position and Window size are specified by the block (Block/1x8dot)

User-Window can be defined up to 4 windows.

The cursor position after excuted this command is specified to top left (X=0, Y=0).

When User-Window is canceled (b=0)

It is not necessary to specify window position [xPL~ySH] in case of cancel the User-Window .

The Base-Window is selected as current window in case of user window canceled was selected as current window.

7.1.36 <Function 10H> US (w n a (Write screen mode select (see sect. 6.3)

Code: 1FH 28H 77H n a

n: Classify command

a: Write screen mode

a = 0: Display acreen mode

a = 1: All screen mode

Definable area: n = 10H

0 ≤ a ≤ 1

Default: a= 0

Function: Select the write screen mode. **This effects only for Base Window.**

Display action is valid within area of either Display ara or Hdden area depending on cursor position.

Select “All screen mode”: Display action is valid on all of screen area.

7.1.37 WINx (Short-Cut Current Window Select)

Function: Current window move to selected window.

Refer to 7.1.34 for more detail.

| WINx | Function |
|------------|-------------------------|
| WIN0 (10h) | Select the base window |
| WIN1 (11h) | Select the user window1 |
| WIN2 (12h) | Select the user window2 |
| WIN3 (03h) | Select the user window3 |
| WIN4 (04h) | Select the user window4 |

7.2 Bit image data format

The Bit image consists of the data for image size ($x * y$) as follows;

| Data | Pattern position |
|---------------|------------------|
| d (1) | P1 |
| d (2) | P2 |
| | |
| d ($x * y$) | $P(x * y)$ |

8 Setup

8.1 Jumper

| No. | Function | Default |
|-----|-------------------|---------|
| J0 | Baud Rate select | OPEN |
| J1 | | OPEN |
| J2 | Select serial I/F | OPEN |
| JRB | Do not use | OPEN |

8.1.1 Baud rate select

| J0 | J1 | Baud rate |
|-------|-------|------------|
| OPEN | OPEN | 38,400bps |
| SHORT | OPEN | 19,200bps |
| OPEN | SHORT | 9,600bps |
| SHORT | SHORT | 115,200bps |

8.1.2 Serial interface select

| J2 | Mode |
|-------|-------------------------|
| OPEN | Asynchronous serial I/F |
| SHORT | Synchronous serial I/F |

9 Connector

9.1 Serial interface connector (Six through holes)

9.1.1 Case of Asynchronous serial interface is selected.

| Pin No. | Signal name | Function | Direction |
|---------|-------------|----------------|-----------|
| 1 | VCC | Power supply | Input |
| 2 | SIN | Data receive | Input |
| 3 | GND | Ground | Input |
| 4 | SBUSY | Display busy | Output |
| 5 | NC | Non connection | - |
| 6 | /RESET | Reset | Input |

9.1.2 Case of Synchronous serial interface is selected.

| Pin No. | Signal name | Function | Direction |
|---------|-------------|---------------|-----------|
| 1 | VCC | Power supply | Input |
| 2 | SIN | Data receive | Input |
| 3 | GND | Ground | Input |
| 4 | SBUSY | Display busy | Output |
| 5 | SCK | Display clock | Input |
| 6 | /RESET | Reset | Input |

10 Notation of firmware version

The firmware version is written in the following position.

Soldering Side

Part Number Date Code Firmware Version

11 Outline Drawing

Unit: mm
(): Reference Only

Notice for the Cautious Handling VFD Modules

Handling and Usage Precautions:

Please carefully follow the appropriate product application notes for proper usage, safety handling, and operation standards for maximum performance.

[VFD tubes are made of glass]

- Because the edges of the VFD glass-envelop are not smooth, it is necessary to handle carefully to avoid injuries to your hands
- Please avoid breaking the VFD glass-envelop to prevent injury from sharp glass particles.
- The tip of the exhaust pipe is fragile so avoid shock from impact.
- It is recommended to allow sufficient open space surrounding the exhaust pipe to avoid possible damage.
- Please design the PCB for the VFD-module within 0.3 mm warping tolerance to avoid any forces that may damage the display due to PCB distortion causing a breakdown of the electrical circuit leading to VFD failure.

[High voltage]

- Avoid touching conductive electrical parts, because the VFD-module uses high voltage exceeding 30~100 volts.
- Even when electric power is turned off, it may take more than one minute for the electrical current to discharge.

[Cable connection]

- Do not unplug the power and/or data cables of VFD-modules during operating condition because unrecoverable damage may result.
- Sending input signals to the VFD-module during a power off condition sometimes causes I/O port damage.
- It is recommended to use a 30 cm or shorter signal cable to prevent functional failures.

[Electrostatic charge]

- VFD-modules needs electrostatic free packaging and protection from electrostatic charges during handling and usage.

[Structure]

- During operation, VFD and VFD-modules generate heat. Please consider sufficient heat radiation dissipation using heat sink solutions.
- We prefer to use UL grade materials or components in conjunction with VFD-modules.
- Wrap and twist motion causes stress and may break VFDs & VFD modules. Please adhere to allowances within 0.3mm at the point of attachment.

[Power]

- Apply regulated power to the VFD-module within specified voltages to protect from failures.
- Because some VFD-modules may consume in rush current equal to twice the typical current at power-on timing, we recommend using a sufficient power capability and quick starting of the power regulator.
- VFD-module needs a specified voltage at the point of connection. Please use an adequate power cable to avoid a decrease in voltage. We also recommend inserting a power fuse for extra protection.

[Operating consideration]

- Illuminating phosphor will decrease in brightness during extended operation. If a fixed pattern illuminates for an extended period, (several hours), the phosphor efficiency will decrease compared to the non operating phosphor causing a non uniform brightness among pixels. Please consider programming the display patterns to use all phosphor segments evenly. Scrolling may be a consideration for a period of time to refresh the phosphor condition and improve even illumination to the pixels.
- We recommend using a signal cable 30cm or less to avoid some possible disturbances to the signal.

[Storage and operating environment]

- Please use VFD-modules under the recommended specified environmental conditions. Salty, sulfur and dusty environments may damage the VFD-module even during storage.

[Discard]

- Some VFDs contain a small amount of cadmium in the phosphor and lead in the solder. When discarding VFDs or VFD-modules, please adhere to governmental related laws or regulations.

[Others]

- Although the VFD-module is designed to be protected from electrical noise, please plan your circuitry to exclude as much noise as possible.
- Do not reconstruct or repair the VFD-module without our authorization. We cannot assure the quality or reliability of unauthorized reconstructed VFD-modules.

Notice:

- We do not authorize the use of any patents that may be inherent in these specifications.
- Neither whole nor partial copying of these specifications are permitted without our approval.
If necessary, please ask for assistance from our sales consultant.
- This product is not designed for military, aerospace, medical or other life-critical applications. If you choose to use this product for these applications, please ask us for prior consultation or we cannot take responsibility for problems that may occur.

Revision Note

| SPEC number | Date | Revision |
|-----------------|---------------|---------------|
| DS-1489-0001-00 | Oct. 30, 2007 | Initial Issue |
| | | |
